Managing Users and Groups in Windows 10 Using Command Prompt

1. Creating a New User

To create a new user account in Windows 10 using the Command Prompt, use the `net user` command.

Command:

```cmd
net user <username> <password> /add
```

Example:

```cmd
net user JohnDoe Password123 /add
```

Explanation:

- `net user` → The command to manage users.
- `JohnDoe` → The username of the new account.
- `Password123` → The password for the account.
- `/add` → Adds a new user to the system.

2. Creating a New User Without a Password

```cmd
net user JohnDoe /add
```

This command creates a user without assigning a password.

3. Adding User to a Group

Users are assigned to groups for permission and access control. The `net localgroup` command allows adding a user to a group.

Command:

```cmd
```

```cmd
net localgroup <groupname> <username> /add
```

Example:

```cmd
net localgroup Administrators JohnDoe /add
```
Copy   Edit

Explanation:

- `net localgroup` → Manages local groups.
- `Administrators` → The group name.
- `JohnDoe` → The user being added.
- `/add` → Adds the user to the specified group.

4. Listing Users

To see all the users on the system:

```cmd
net user
```
Copy   Edit

This command displays all local user accounts.

5. Viewing User Details

```cmd
net user JohnDoe
```
Copy   Edit

This command displays details of the user JohnDoe.

6. Changing a User's Password

```cmd
net user JohnDoe NewPassword123
```
Copy   Edit

This changes the password for JohnDoe.

7. Deleting a User

```cmd
cmd                                              Copy      Edit

net user JohnDoe /delete
```

This command removes the user JohnDoe from the system.

8. Creating a New Group

```cmd
cmd                                              Copy      Edit

net localgroup ITTeam /add
```

This command creates a new group named "ITTeam."

9. Adding a User to a Group

```cmd
cmd                                              Copy      Edit

net localgroup ITTeam JohnDoe /add
```

Adds the user JohnDoe to the ITTeam group.

10. Removing a User from a Group

```cmd
cmd                                              Copy      Edit

net localgroup ITTeam JohnDoe /delete
```

Removes JohnDoe from the ITTeam group.

11. Deleting a Group

```cmd
cmd                                              Copy      Edit

net localgroup ITTeam /delete
```

Deletes the group ITTeam.
